Evaluation For Personal Injury Claims (Best Practices For Forensic Mental Health Assessments)

Synopsis

Forensic mental health assessment (FMHA) has grown into a specialization informed by research and professional guidelines. This series presents up-to-date information on the most important and frequently conducted forms of FMHA. The 19 topical volumes address best approaches to practice for particular types of evaluation in the criminal, civil, and juvenile/family areas. Each volume contains a thorough discussion of the relevant legal and psychological concepts, followed by a step-by-step description of the assessment process from preparing for the evaluation to writing the report and testifying in court. Volumes include the following helpful features:Â Boxes that zero in on important information for use in evaluationsÂ Tips for best practice and cautions against common pitfallsÂ Highlighting of relevant case law and statutesÂ Separate list of assessment tools for easy referenceÂ Helpful glossary of key terms for the particular topic. In making recommendations for best practice, authors consider empirical support, legal relevance, and consistency with ethical and professional standards. These volumes offer invaluable guidance for anyone involved in conducting or using forensic evaluations. This book addresses the assessment of personal injury claims, and explores the history and importance of this process, the legal standards and the procedure for applying this assessment in court. Established empirical foundations from the behavioral, social, and medical sciences are then presented. Finally, the book provides a detailed "how-to" for practitioners, including information on data collection, interpretation, report writing and expert testimony.

Customer Reviews

"This excellent book is not exhaustive, but it provides important information, especially for clinicians who are learning how to conduct these evaluations. The authors are experts in the field and the book is easy to read." -- Gary B Kaniuk, Psy.D. (Cermak Health Services), Doody's "This is a book you will want to refer to frequently and recommend to every personal injury attorney and to every psychological expert you may engage. Any psychological expert that relies on this book as a roadmap for excellence in the forensic field will be assured of success in the courtroom. If you have just one book on the subject in your library, this is the one to have." -- Wendy Saxon, Ph.D., The Jury Expert

Andrew W. Kane, Ph.D., ABAP is Professor, Wisconsin School of Professional Psychology and a Forensic Psychologist in Private Practice. Joel A. Dvoskin, Ph.D., ABPP is Assistant Professor, University of Arizona and a Forensic Psychologist in Private Practice.

This is a great, concise guide to performing personal injury assessments. This book provides an excellent overview of the legal context for these assessments without over-burdening the reader with endless case law citations and then provides a framework for how to actually do the assessment in a logical and defensible manner. If you read one book on the subject, this would be it. The authors are extremely knowledgeable and experienced and know wherefore they speak.

Damn good material. Pretty much anything Randy Otto writes or says about forensic psychology is gold and this book is no exception. It's like these authors have thought through most of the subtle, but sometimes crucial, bumps in the road encountered by forensic mental health evaluators and are willing to share their wisdom. Really like this book.

Great resource
