Veterinary Drug Handbook 4e is now available in an abridged pocket size that covers the same drug monographs as the Desk Edition. The author has meticulously condensed each monograph so as to maintain the book's reputation for accuracy, yet provided a smaller book that facilitates user-access in the clinical setting. Rounded corners and high-quality thinner paper add to the portability of this version. I am always cautious when it comes to getting something preowned/used because sometimes the item descriptions can't be trusted and the item has been through hell and back but I am very pleased with the way this book turned out. Of course it has the usual bumps and scrapes that comes with owning a paper back book but the description said that it was "Used-Acceptable" which in my opinion is not true. If I were to have sold this book I would have put it as "Used-Very Good" because it does not have any spine creases or any major corner scrapes or tears. All in all, I could not be any more happier with this product than I am now. Thank you for this amazing book!

I'm giving this book a 5 star review only because it was so hard to find. We needed it for a court case after a veterinarian used this 1999 book to miscalculate a dose of medication for our cat causing blindness. The Plumb's Veterinary Drug Handbooks are the go to books for professionals. They just usually use the current one.

great book

Great reference book. I have horses and dogs and this helps me with medication guidelines and helps me to decide when to call a vet.

## my drug bible

This book is a vital and must needed item for college for a veterinary technician student! It had what you need.

Good information on extra-label uses of animal and human drugs for veterinary medical professionals. Lists dosages for large, small, and exotic species. Well organized and easy to use. A great value.

This reference has not been updted since 2003? While it may still offer benefit, this reference, at least 14 - 15 years old, should have been updated long before now. Would anyone be comfortable using a similar and outdated reference for their own health needs?!!
